- Note:
1. Recommended panel thickness is 1 to 8 mm (0.04 to 0.31 in).
 2. Because mounting brackets are attached to the top and bottom of a temperature controller, tight side-by-side mounting is possible.

Nomenclature

Key	Description	Key	Description
1	Main display sequentially displays the present temperature, set temperature, and an alarm value each time the return key is pressed.	7	The hidden write protection key provides protection against unauthorized to set temperatures and is used in conjunction with the internal "protection" switch. If the internal protection switch is set to ON, then to obtain Up and Down operation, the hidden key must be pressed simultaneously with the Up and Down keys. If the internal protection switch is set to OFF, changes can be made simply by pressing the Up and Down keys.
2	Control output indicator lights when the output is ON.	8	Display data identifier lights SP when the set temperature is displayed on the main display and AL when an alarm value is displayed.
3	Alarm indicator lights when the alarm output is ON.		
4	Up key increases the set temperature or alarm value when pressed. Increases the value quickly when held down.	9	Red deviation indicators light an up arrow when the present temperature is higher than the set temperature and light a down arrow when the present value is lower than the set temperature. The green block indicates the temperature deviation is within $\pm 1\%$ of the full scale.
5	Down key decreases the set temperature or alarm value when pressed. Decreases the value quickly when held down.		
6	Return key changes the value displayed on the main display each time pressed.
