

1/2" to 16"; Pressure to 87 psi

## Design

The Type 8045 Magmeter is an insertion type flow meter for pipe sizes from DN 15 – DN 400 (1/2" – 16") and is ideally suited for dirty liquids or slurries, having a conductivity >20 $\mu$ S. Fittings are available in stainless steel, brass, PVC, PP and PVDF. A wide selection of end connections is offered including; NPT, flanged or Tri-Clamp®.

Featuring a proven technology, the Type 8045 comes in the same sizes and offers the same output signals as all of the Burkert paddlewheel sensors. This includes: 4-20mA, a pulse and two relay outputs. The electronics are menu-guided and provide easy man-machine communication. A clear, easy-to-use text including engineering units are displayed on a large 8-digit LCD display. If required, any existing installation using Burkert insertion paddlewheel transmitters or sensors

can be directly upgraded with the Type 8045 in a few minutes.

For easy start-up, a SIMULATION-MODE is available allowing the simulation of all output signals just as if actual flow existed. With this, the user can first simulate all flow conditions safely, including the alarm points, before putting the system into service. Calibration is done by either using the standard calibration factors or Burkert's unique TEACH-IN function. If TEACH-IN is used, the unit will do an auto-calibration once installed in the system.

The Type 8045 is a perfect choice for systems using Burkert Type 2030 and 2031 general purpose diaphragm valves for the control of liquids with or without suspended solid particles. Connection is done using the Burkert Easy Link concept.

## Advantages / Benefits

- ▶ **Easy System integration by Easy LINK provides low cost of ownership**
- ▶ **Solid-State sensor technology (no moving parts)**
- ▶ **Displays both flow rate and volume**
- ▶ **Easy commissioning with multi-language, menu-guided operation**
- ▶ **SIMULATION: All output signals provided without the need for actual flow**
- ▶ **TEACH-IN: Automatic calibration for specific installations**
- ▶ **Fittings available in stainless steel and brass DN 15 – DN 50 (1/2" – 2"), in PVC, PP and PVDF DN 15 – DN 400 (1/2" – 16")**

## Applications

### Flow control of liquids with or without solid particles

Waste water treatment

Surface treatment

Laundries

Chemical industry (non hazardous applications)

Food industry

Auxiliary plants

Swimming pools

**bürkert**  
Easy Fluid Control Systems

### Design

The Type 8045 transmitter consists of an insertion magmeter sensor, an electronic circuit board with LCD display and three function keys in an IP65 enclosure. The sensor, with two electrodes, is constructed of PVDF and has a stainless steel grounding ring which contacts the process fluid.

The transmitter amplifies and converts a measured signal. It displays flow rate, two total flow values and its current output in milliamperes, which is proportional to the actual flow rate. All output signals are provided via cable plug or cable gland.

### Installation

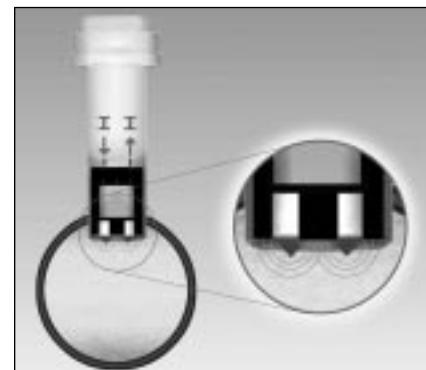

The Type 8045 flow transmitter can be installed directly into any standard Burkert insertion fitting. For a standard installation, it is recommended that there be 10 pipe diameters of straight pipe section upstream and 3 pipe diameters downstream of the transmitter.

For fluid systems consisting of a transmitter in line with a valve, it is recommended that the fluid pass through the transmitter first, then the valve.

The Type 8045 flow transmitter can be installed in either horizontal or vertical pipes. In horizontal pipes, the transmitter can be oriented anywhere around the circumference of the pipe

### Principle of Operation

The E-shaped magnetic system built into the sensor induces a magnetic field into the fluid, which is perpendicular to the direction of flow. The two electrodes are in galvanic contact with the fluid. Based on Faradays' Law, a voltage can be measured proportional to the speed of flow of a liquid in a pipe. The liquid must have a minimum conductivity of  $20\mu\text{S}$ . Using the J-factor for an individual pipe diameter, the speed of flow is then converted into volume per unit of time, i.e. gpm or m<sup>3</sup>/hr.

### Operation / Start-Up

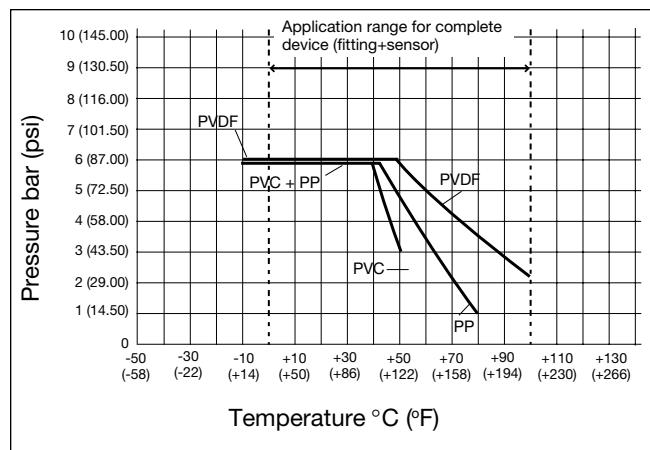

The device is calibrated by means of the K-factor or via the TEACH-IN function. Customized adjustments such as measuring range, engineering units, pulse output and filter setting are performed on site.

except at the 6 o'clock or 12 o'clock positions. In vertical pipe runs, the preferred installation is in a pipe with the flow moving in the upward direction, that is, flow from the bottom to the top. Once installed, the display may be rotated in 90° increments to optimize the viewing angle.

The proper pipe size for a given application is selected using the diagram on the next page. Pressure and temperature limitations must be considered when selecting the installation fitting material. See the next page for the limits of our PVC, PP, and PVDF fittings.

The flow transmitter is not designed for gas flow measurement.

### Pressure-Temperature-Diagram for plastics

### Examples of fitting selection

The suitable pipe size is selected using the diagram next page.

#### Example 1:

Specification of nominal flow:  $10 \text{ m}^3/\text{h}$

Ideal flow velocity:  $2 - 3 \text{ m/s}$

For these specifications, the diagram indicates a pipe size of DN 40.

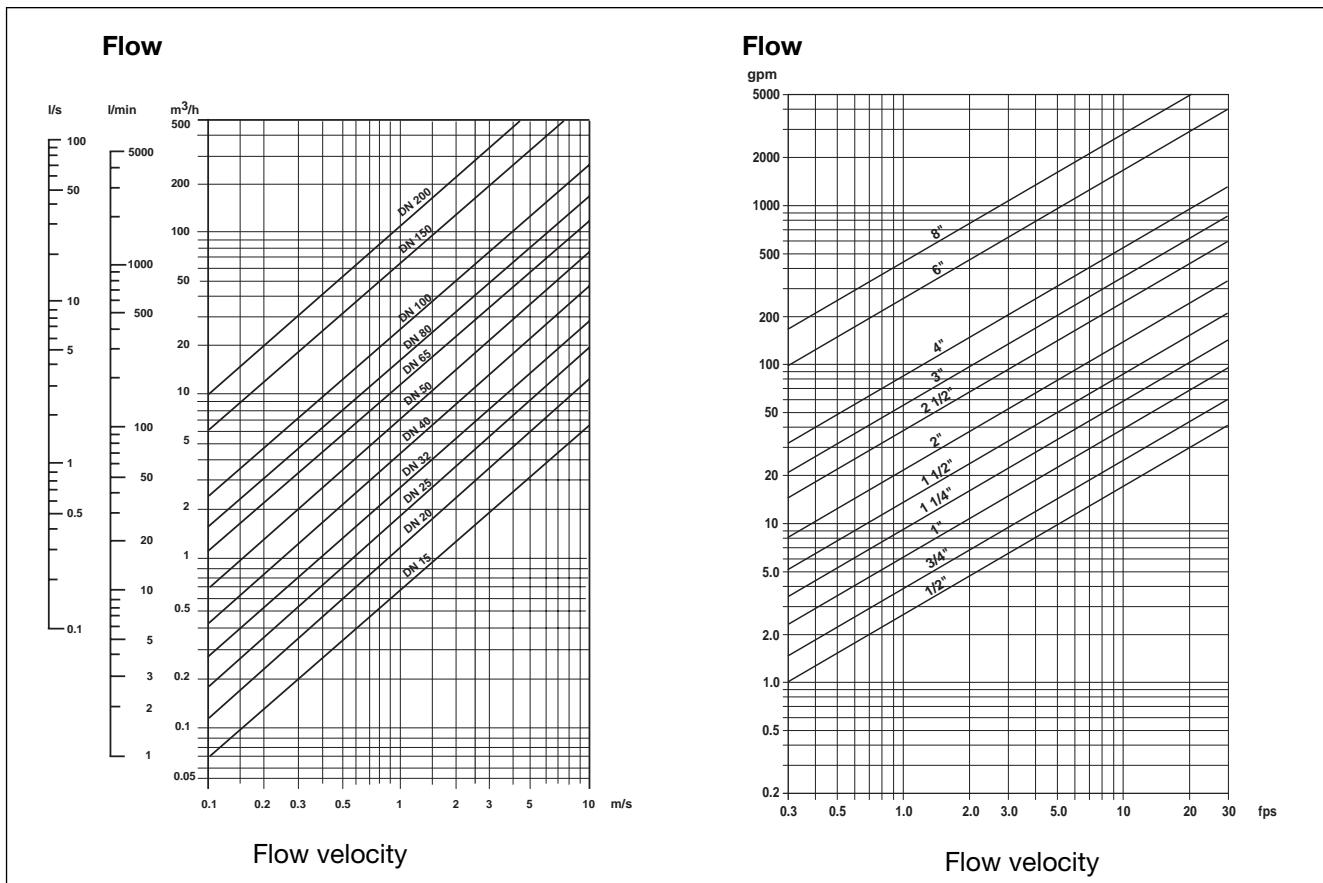

#### Example 2:

Specification of nominal flow:  $50 \text{ gpm}$

Ideal flow velocity:  $8 \text{ fps}$

For these specifications, the diagram indicates a pipe size of 1-1/2".

**Flow Rate – Flow Velocity – Pipe Size**

**Operation and Display**

The unit is operated in the following 3 different menus:

► **Operation menu**

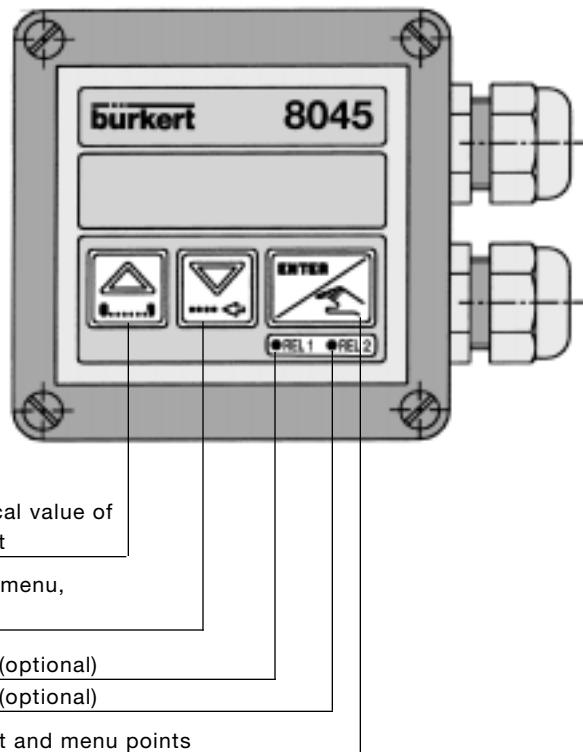

- Flow
- Output current
- Main totalizer
- Daily totalizer and reset function

► **Calibration menu**

- Language
- Engineering units
- K-factor/Teach-in function using volume or master calibration
- Measuring range 4–20mA
- Pulse output
- Relay (optional)
- Filter
- Reset of main totalizer

► **Simulation menu**

- Adjust Zero and Span
- Simulate flow in dry-run operation

**Technical Data**

**General Data**

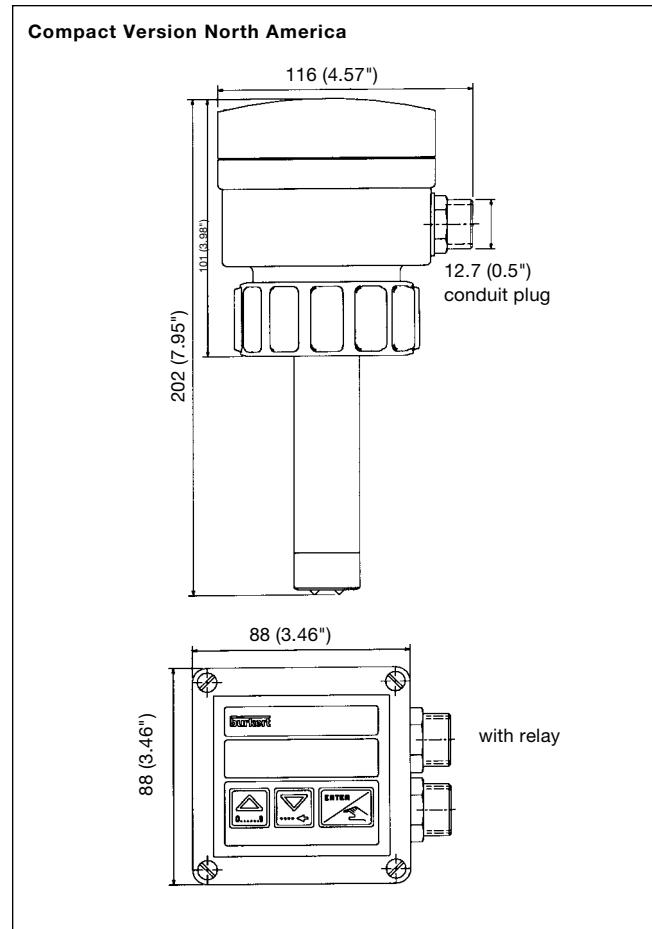

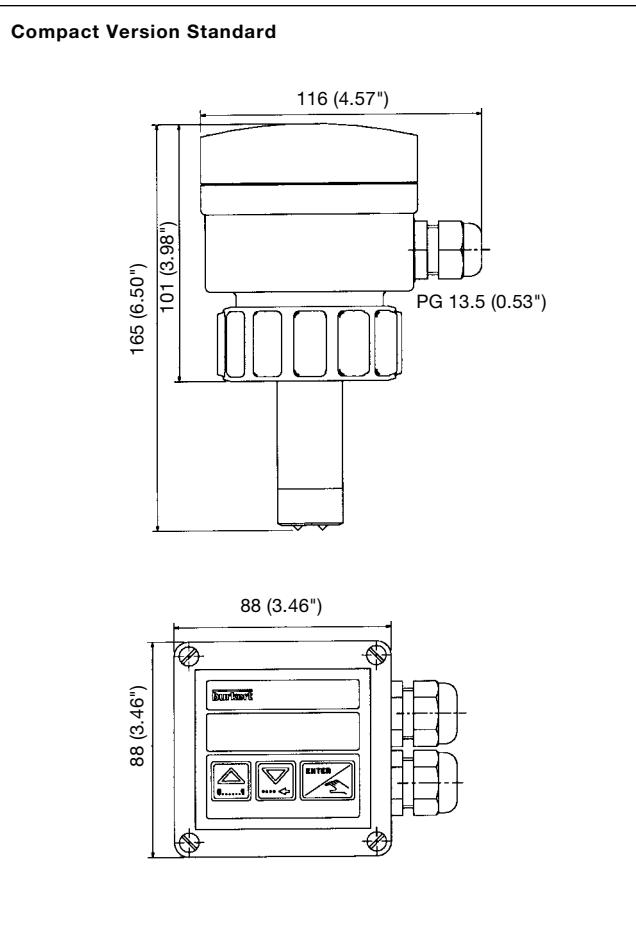

Measuring range	0.05 - 10 m/s (0.16 – 33 fps)
Measuring error	1. With individual works calibration (on request) or Teach-In: $\leq \pm 2\%$ o.R. 1 – 10 m/s (3.2 – 33 fps)* 2. With standard mean K-factor: $\leq \pm 4\%$ o.R. 1 – 10 m/s (3.2 – 33 fps)*
Linearity	$\leq \pm(1\% \text{ o.R.} + 0.1\% \text{ o.F.S.})^*$
Repeatability	$\pm 0.25\% \text{ o.R.}^*$
Temp. coefficient	DN15 (1/2") = $+0.2\% /K^{1)}$ DN20, DN25 (3/4" & 1") = $+0.1\% /K^{1)}$ >DN25 (>1") = $+0.05\% /K^{1)}$ <small>1) Reference temperature</small>
Display	15x60 mm (.6x2.4"), 8-digit LC-display, alphanumeric, 15 segments, 9 mm tall (0.35" tall)
Fluid conductivity	> 20 $\mu\text{S}$ (Micro-Siemens)
Fluid temperature max.	PVC: 0 to 50°C (32 to 122°F); PP: 0 to 80°C (32 to 176°F); PVDF: 0 to 80°C (32 to 176°F); Brass, Stainless Steel: 0 to 80°C (32 to 176°F);
Ambient temperature	0 to 60°C (32 to 140°F)
Storage temperature	0 to 60°C (32 to 140°F)
Pressure class	PN 6 (87 psi)
Enclosure	IP65 (NEMA4)
Sensor material	Body in PVDF, electrodes Stainless Steel (1.4404 / 316L)
O-rings	FPM standard
Housing	Polycarbonate
Front plate foil	Polyester
Fittings	Are available for the following pipe sizes and materials
Pipe diameters	Stainless steel: DN15 to DN50 (1/2" to 2"); DN65 to DN350 (2-1/2" to 14" weld-o-let) Brass: DN15 to DN50 (1/2" to 2") PVC, PP, PVDF: DN15 to DN 50 (1/2" to 2") (true union, solvent spigot) DN65 to DN200 (2-1/2" to 8") (saddle); DN65 to DN400 (2-1/2" to 16") (weld-o-let)
Power supply	12–30 VDC, 3-wire
Output signal	4–20mA
Load	Max. 900 $\Omega$ at 30 VDC Max. 500 $\Omega$ at 24 VDC Max. 100 $\Omega$ at 15 VDC
Pulse output	Open collector NPN and PNP, 0–30 V, 100mA, protected Option: Reed relay closing 0.1 s, opening depending on flow rate, minimum is 0.1 s Switches max. 34 VDC, 0.2 AMPS
Relay output (optional)	2 relays, freely programmable, 3 A, 230 V

\* Under reference conditions, i.e. measuring fluid = water, ambient and water temperature = 20°C (68°F), applying the minimum inlet and outlet pipe straights, matched inside pipe dimensions  
 o.R. = of reading  
 o.F.S. = of full scale (10 m/s)(33 fps)
