

8205 Digital pH-Controller

Digital pH-Controller

- Flat glass probe featuring self cleaning and abrasion-free operation.
- Freely programmable PID controller functions for easy pH-control systems solutions
- Remote version with separated controller away from the sensor
- Commissioning is easy due to multi-language, menu-guided operation
- For use in both pipes and tanks using custom fittings or submersion kits
- Approval

The 8205 pH system measures 0–14 pH, $\pm 0.2\%$ accuracy in 1/2" to 4" lines, wet tap assembly or tank submersion fittings. Available in stainless steel, brass, PVDF, PP or PVC.

The 8205 pH controller combines easy control functionality with an integrated or remote sensor probe for an intelligent, low-cost, ON/OFF or continuous process pH control solution. The Type 8205 directly links with a full range of Burkert process valves specifically designed for the control of acids and caustic fluids to create high-accuracy pH control systems. Applications range from wastewater treatment and cooling water monitoring to chemical dosing, food and beverage, pharmaceutical, electroplating, and swimming pool engineering. The new sensor is competitively priced and compatible with most industry standard valves.

Easily integrated into existing and new process systems, the Type 8205 unit features a 4–20 mA output signal of process pH value, two pulses outputs and one alarm output. The output signals control valves or pumps directly by means of standard output impulses that vary in frequency and duration in accordance with the user's parameters and the desired pH value set point for the process.

The controller is easy to program and calibrate via three input keys and menu-driven screens that also enable individual calibrations of all measuring ranges. The unique "SIMULATE" function allows the user to temporarily simulate a set pH while conducting maintenance or sensor calibration. This eliminates nuisance alarms and incorrect pH readings in a networked distributed control system while the pH controller maintenance or calibration is conducted.

The sensor component can also be remotely panel or wall mounted. It has a Pt1000 temperature sensor (if desired) for automatic temperature compensation.

The Type 8205 Controller systems are available in three different remote mounting configurations: in-line, submersion and wet tap.

These kits include all necessary components to use the 8205 series pH controller in a tank pH-monitoring configuration. The system item number includes the probe, fittings, 25' of cable, and a panel or wall mount controller that can be mounted in a variety of locations. The only parts not included are PVC pipe and fittings for your custom mounting application.

Applications

- pH-measurement
- Waste treatment engineering
- Water treatment and process technology
- Cooling water monitoring
- Swimming pool engineering
- Chemical dosing
- Electroplating

The pH – control system

ON / OFF Process Control

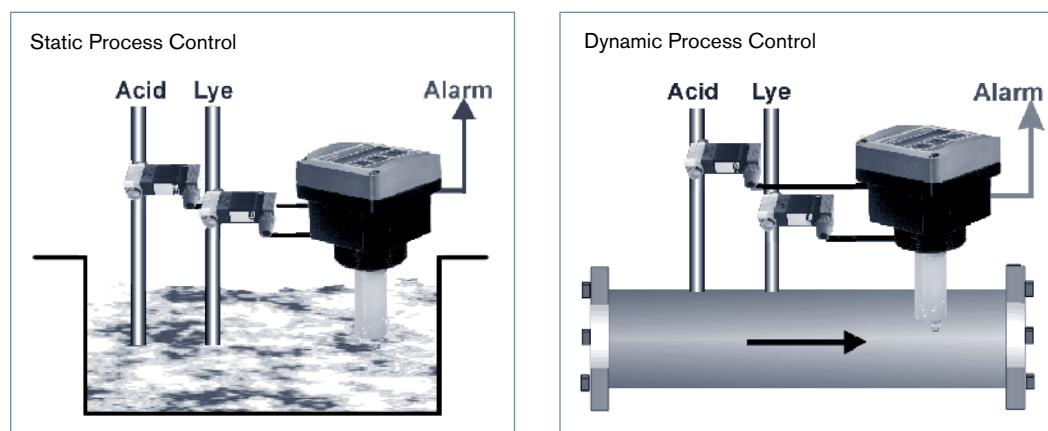

Description

DTS 1000082473 EN Version:- Status: RL (released | freigegeben | validé) printed: 13.08.2008

Controlling principle

The pH-controller Type 8205 is designed for use in static or dynamic process pH-control. The output signals control a valve or a pump by means of impulses which vary in time duration or frequency and are computed according to the users' parameters and the set pH-value of the fluid.

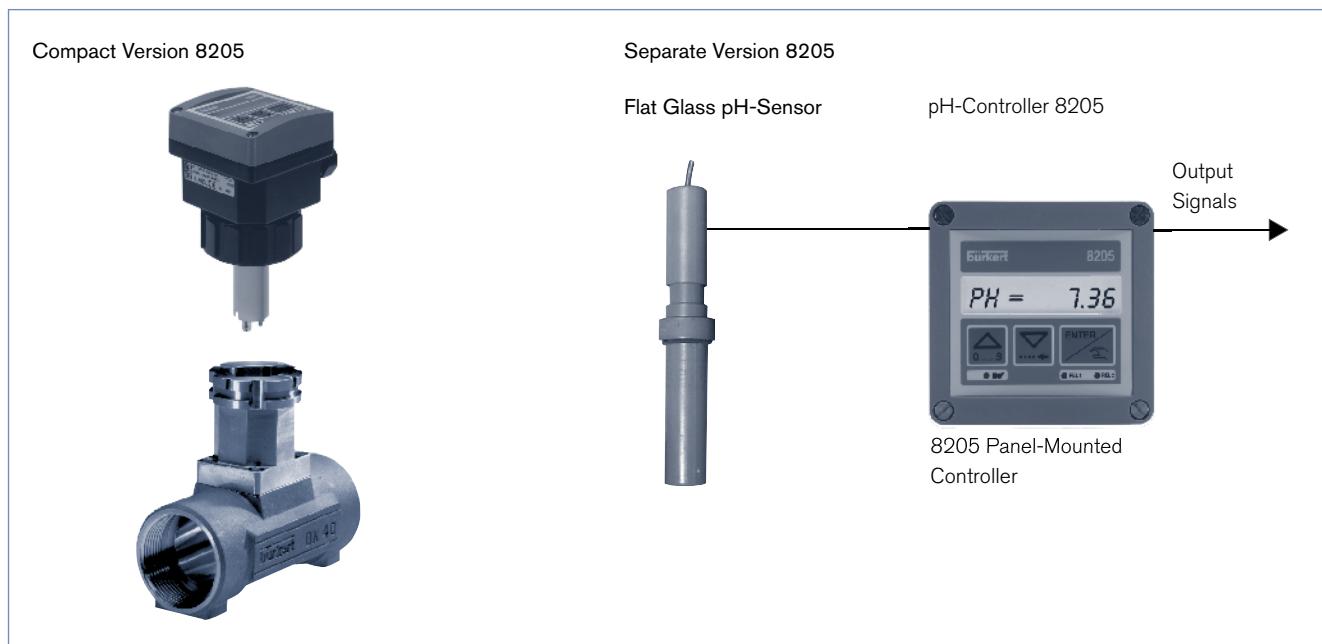

Principle of operation

The most important part of a pH-electrode is the glass membrane of the pH-selective glass. When the electrode is immersed into the solution, an electrical charge caused by H-ions (H^+) generates a cell voltage between the glass membrane and the solution. This electric voltage is recorded with reference to a reference electrode, located around the pH-glass electrode. The cell voltage of the combination electrode is directly proportional to the pH-value. The controller functions in a 3-wire circuit and requires a power supply of 12 – 30 VDC. The wall-mounted version is also available with a 115 – 230 VAC power supply. A relay alarm contact, and a 4 – 20 mA standard signal proportional to the pH-signal or to the temperature ($^{\circ}F$), are available output signals. The pulse output signals are provided by relays (standard), triacs, or transistors.

Installation

The compact pH-controller can easily be installed into any Burkert insertion fitting system, S020 or 1500 / 1501, by connecting the main nut. The controller Type 8205 is available in a panel-mounted version or in a wall-mounted plastic NEMA 4 enclosure.

Operation / commissioning

Customized adjustments, such as measuring ranges, engineering units, and alarm setpoints can be performed on site via a multi-lingual display. Please refer to the operating instructions prior to commissioning the devices.

Technical data – pH electrode

The pH-controller is available with flat glass type electrode as standard. This design provides an extra barrier against reference side contaminations. Also, it allows the electrodes to be used in applications where sulfides, mercaptans, heavy metal ions and similar materials are present. In the remote versions, the top of the electrode body has the quarter turn, quick disconnect BNC connector and the leak-tight O-ring seals. All replacement electrodes are supplied complete with O-rings. The service life of the pH-electrode depends on the application. Electrode in the Type 8205 can easily be replaced.

Operation and display

The operation of the pH-controller is divided into the following 3 different menus:

Main Menu

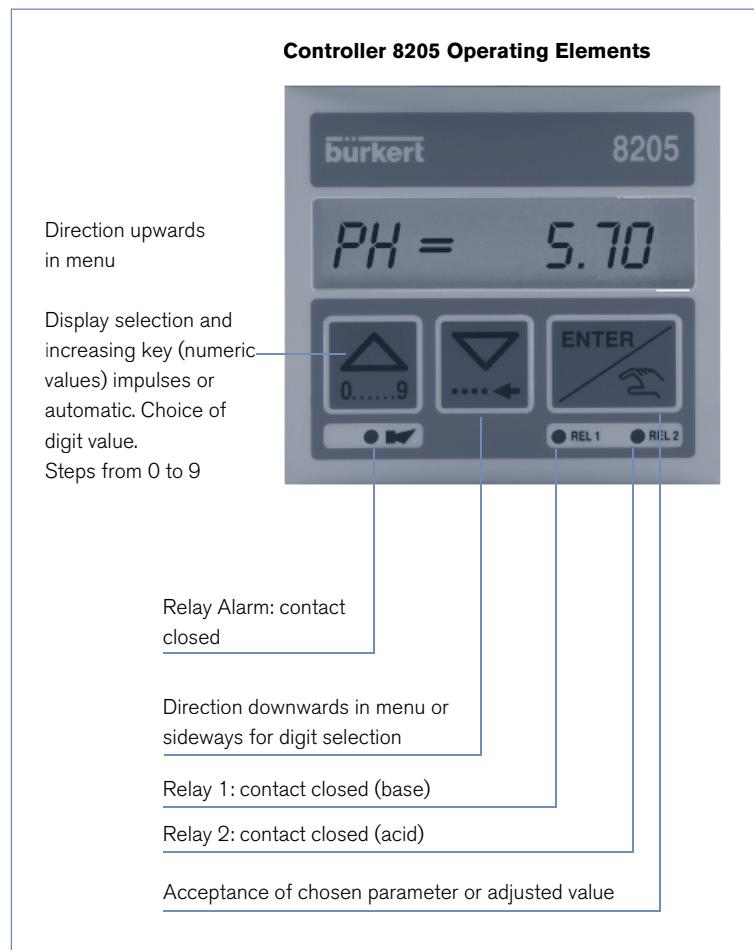

- pH; setpoints; working rates
- Temperature
- Output current
- HOLD function
- pH-electrode calibration

Calibration Menu

- Language
- Temperature units
- Measuring range 4 – 20 mA
- Pulse output
- Impulse duration
- pH-setpoint adjustment
- Regulation principle (P; PI; PID)
- Alarm threshold
- Manual display selection
- Temperature selection mode
- Filter selection

Test Menu

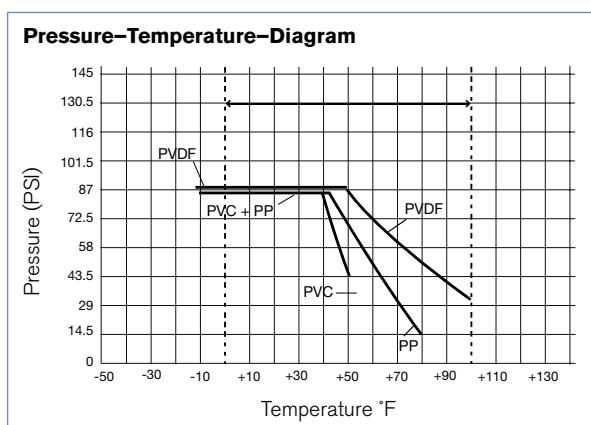

- Offset
- Span
- Temperature adjustment
- Simulation of pH or temperature value
- Display of instantaneous electrode voltage

Technical data

General data	
Measuring range	0 – 14 pH
Measuring error	+/-0.2%, depending on electrode calibration
Temperature compensation	Automatic (integrated Pt1000) reference temperature 77°F (25°C)
Ambient temperature	32°F to 140°F (0°C to 60°C)
Storage temperature	32°F to 140°F (0°C to 60°C)

Compact version	
Pipe diameter	Stainless steel 1/2" to 2" (DN 15 to DN 50) fitting Type S020 21/2" to 4" (DN 65 to DN 100) weld-o-let fitting Type 1500 Brass 1/2" to 2" (DN 15 to DN 50) fitting Type S020 PVC, PP, PVDF 1/2" to 2" (DN 15 to DN 50) fitting Type S020 PE, PP, PVDF 21/2" to 4" (DN 65 to DN 100) weld-o-let fitting Type 1501
Enclosure	NEMA 4 (IP 65) Relative humidity max. 80%
Electronic housing	Polycarbonate
Front plate	Polyester
Sensor housing	PVDF; O-rings FKM / EPDM
Voltage supply	12–30 VDC
Consumption	80 mA (with relays), 20 mA (with triac or transistor)
Display	.6 x 2.4 in. LCD 8 digits, alphanumeric 15 segments, .35 in. high
Analog output signal	4 – 20 mA programmable, proportional to the pH or to the temperature
Load	<1300 Ω at 30 V; <1000 Ω at 24 V; <550 Ω at 15 V
Relay output (alarm)	1 relays 3 A / 230 V; freely adjustable
Temperature Sensor Pt1000	Stainless Steel 316 Ti
Pulse outputs	Relay 3A / 250 V max.; F < 1 Hz Transistor 300 mA / 30 V max.; F < 17 Hz Triac 1 A / 250 V max.; F < 17 Hz

Ordering chart for remote pH systems (includes 25 ft. cable for pH electrode)

The pH-Controller systems as shown on first page, include 4–20mA output, choice of relay, transistor, or triac pulse outputs, 25' of cable from pH sensor to transmitter, flat self flushing pH probe designed for longer life expectancy housed in a CPVC body. pH Probe connects to cable via quick BNC connector for easy maintenance and/or replacement. Nema 4 wall mounted or panel mounted transmitter, pH Simulation Mode, easy 2 point calibration with hold function thus locking in existing plant conditions during calibration. All systems shown are 24VDC. 115–230 AC versions available for wall mount electronics only

Type 8205 In Line pH-Controller System with Wall or Panel Mount Electronics and 2 Relay Pulse Outputs

Description	Item no.
Wall Mount System	
3/4" NPT PVC fitting, Temperature Compensated	US07471
3/4" NPT PVC fitting, No Temperature Compensation	US07472
