

AIR CONDITIONER OPTIONS:

2" LOUVERED FRAME & 2" FILTER OPTION (XXM)

Many applications and environments are excessively dusty. If your application is in a flour mill, cement plant or coal processing plant, you understand. These types of environments can create real problems for an air conditioner that by its very design requires a steady flow of reasonably clean air in order to function. The reality is that air conditioners are only as good as their air flow.

Because of this, Thermal Edge offers our extended surface, 2" deep filter and filter frame assembly. Pictured below, this slide in, slide out filter frame and filter combination will increase the filter capacity 400% over our standard filters.

The filter is washable and replaceable. The life expectancy is determined by the environment and the ways in which it is washed and cleaned.

This deeper filter frame fits the standard holes on our NE, HC, WF and CS series units.
